

## Adding RSS Feeds to the Dashboard is Really Simple

Don't have time to visit all your favorite news and blog sites? Bring them right to your flexmls® Web Dashboard using RSS feeds (short for Really Simple Syndication). Here's how:

From the *Home* Dashboard click the *Customize* button in the upper-right corner of your screen and select *Add Gadgets* from the drop-down menu.

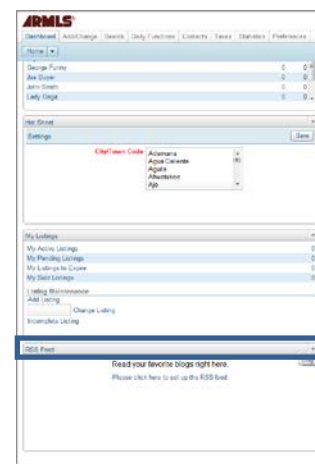

When the screen updates, select *News* from the Gadget list on the left and click the *Add Gadget* button for *RSS Feed*.

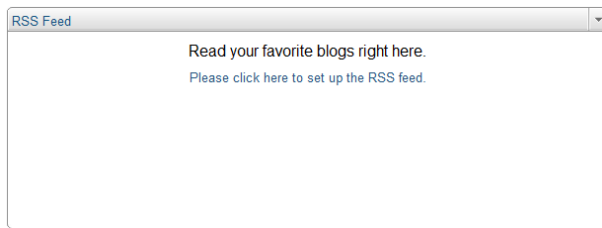

The *RSS Feed* module will update to reflect that the Gadget was added successfully. Click the *Return to Dashboard* button in the upper-right corner to leave this module and return to your dashboard.

Upon return to the Dashboard, the new Gadget will be located in the bottom-left column of existing Gadgets.

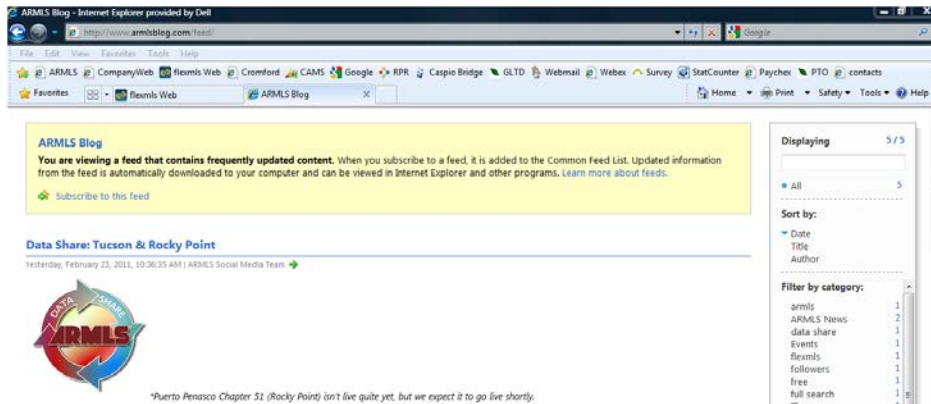

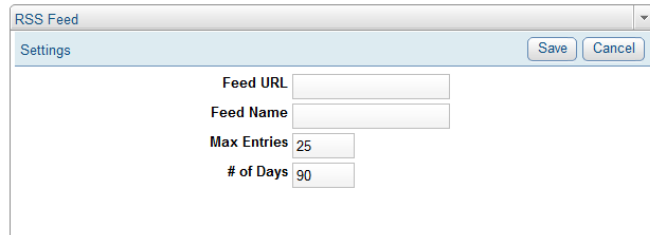

To relocate this Gadget to another position on the Dashboard, left-click on the Title bar at the top of the Gadget, drag the Gadget to the new location releasing the mouse button to "drop" it.

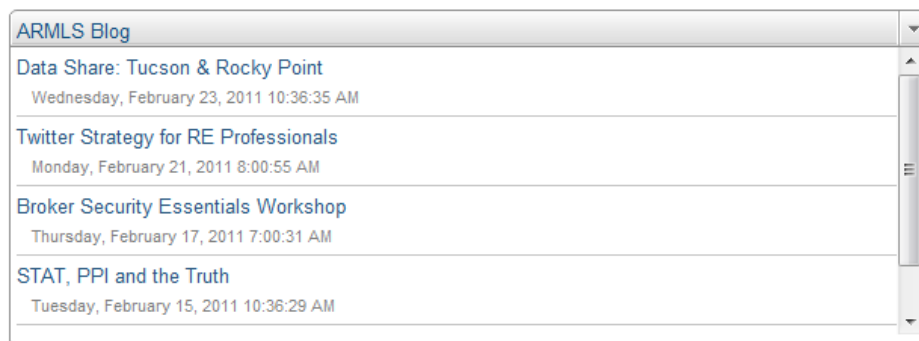

Click the *Please click here to set up the RSS feed* link to add your feed to the Dashboard.

The Gadget box will update with the necessary fields required to add your feed.

Copy the feed URL from your favorite site and paste it in the *Feed URL* box. Name your feed however you wish and set the maximum number of entries you wish to show in the Gadget as well as the number of days of information to remain in the window. Click *Save* to finish.

The latest news & information is now available at your finger tips. To read full articles, click the topic links in blue and a new window will open with the full article.
