

Printing on One Page in Mozilla Firefox

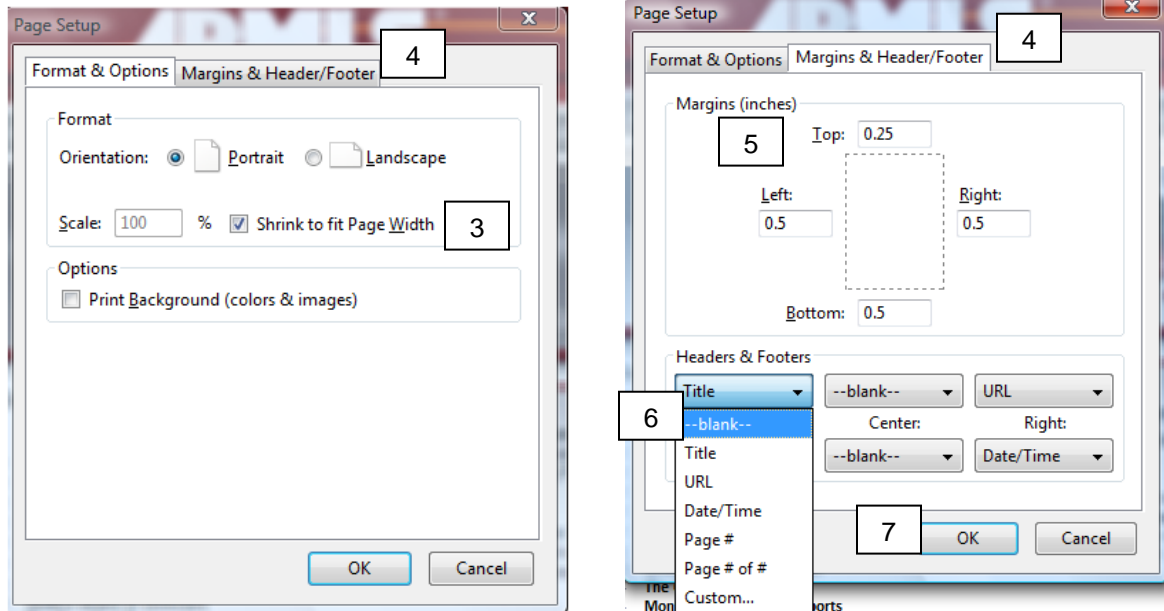

Want to print flexmls Listing Detail Reports on one page? In a [previous tip](#), we showed you how easy printing on one page can be using [Internet Explorer](#).

Here's how to do it in Mozilla Firefox:

To adjust Firefox's print settings:

1. Click *File* in the upper-left corner of the Firefox Menu bar. If your Menu bar is hidden press *ALT* to unhide the Menu bar.
2. Select *Page Setup* which will open a new dialog box.

3. Check box to *Shrink to fit Page Width*
4. Select the *Margins & Header/Footer* tab at the top
5. Change **all four** Margins to *0.25*
6. Change **all** Headers & Footers to *--blank--*
7. Click *OK* to save the changes

This should be the only time you have to adjust these settings. Your Listing Detail Reports as well as all Internet printing should work much better now.

Some listings cannot be printed on one page if they have advanced features and amenities, commonly found in homes priced over \$1 million.
